maxiCOR™

Body Recomposition Accelerator†

maxiCOR™ is a science-driven and high quality formula designed to promote body re-composition acceleration in healthy individuals when combined with resistance training or physical exercise. Body re-composition means increasing lean body mass (LBM) while reducing fat mass (FM) representing a “build and burn” effect. To accomplish this, maxiCOR™ combines the benefits of 4 carefully selected powerful ingredients including Fenugreek (Trigonella foenum-Graecum) [Containing 70% Oligosaccharides] (as Physicor™), Berberine, Bitter Orange Extract (Citrus aurantium) (as Advantra Z®), and Ashwagandha Extract (Withania somnifera) [Containing 7% Withanolides] to facilitate your body transformation goals.† Physicor™ is a new patented fenugreek extract standardized to a proprietary 70% galactomannan oligosaccharides content to build, burn and perform. It has recently been awarded self-affirmed Generally Recognized as Safe (GRAS) status with a comprehensive background of safety and toxicology studies. Key features of Physicor™ is that it has a unique ability to build and cut core muscle tissue. Physicor™ has clinically been shown to trigger the synthesis of lean muscle while burning visceral body fat in conjunction with resistance training. Poole C, et al. conducted an 8 week human clinical study in the Department of Exercise and Sport Science, University of Mary Hardin-Baylor. The study design was a double-blind, placebo-controlled trial that included 49 already resistance-trained, healthy adults. Subjects in the experimental group ingested 500mg Physicor™ once per day in the morning on non-training days and prior to their workout on training days. Subjects in the placebo group took the same 500mg dose of inert material. Key outcomes of the study showed:

• University Tested Subjects Taking Physicor™ Along With Resistance-Training Gained 3.9 lbs. Lean Body Mass Compared to the Placebo Group in 8 Weeks.*
• Subjects Lost 3.8 lbs. of Body Fat Compared to the Placebo Group.*
• Subjects Increased Bench Press (Upper Body) Strength by 11 lbs. (110%) Compared to the Placebo Group.*
• Subjects Increased Leg Press (Lower Body) Strength by 80 lbs. (75%) Compared to the Placebo Group.*
• Physicor™ is not a stimulant and had no effect on heart rate of blood pressure.*
• Physicor™ did not affect androgenic hormones, making it attractive to both men and women.*

maxiCOR™ contains the same efficacious clinical dose of 500mg Physicor™ per serving. Advantra Z® is a patented and branded standardized extract from the bitter orange citrus fruit (Citrus aurantium). Advantra Z® contains a complete and naturally occurring synergistic family of bioactive amines including its primary protoalkaloid p-synephrine in addition to N-methyltyramine, hordenine, octopamine and tyramine. The unique form of synephrine in Advantra Z® is called p-synephrine and is the only clinically shown safe form for humans. Advantra Z® has been shown to be safe and effective in over 30 research studies and scientific reviews. Clinical efficacy studies have found Advantra Z® stimulates metabolic thermogenesis, promotes fat breakdown, increases the ratio of lean muscle to total body mass, improves athletic performance and exerts an appetite suppressing effect. Most importantly, Advantra Z® has no effect on normal cardiovascular function and is unequivocally safe for human consumption.†

500mg Physicor™ per day in conjunction with resistance training had a 3.9 lbs. lean muscle gain, 3.8 lbs. of body fat reduction, and 110% increase in strength in 8 weeks.*
• Contains Advantra Z® (Bitter Orange, Citrus aurantium) which is a proprietary patented ingredient containing a family of naturally occurring bioactive amines. Advantra Z® contains p-synephrine and is the only proven safe and effective form of Citrus aurantium extract indicated for weight loss and physical performance on the market today!
• Berberine (BBR) decreases energy expenditure, limits weight gain, enhances thermogenesis and enhances brown adipose tissue (BAT) activity in obese laboratory animals. BBR activates AMP-activated protein kinase (AMPK) to induce the phosphorylation of Sterol Regulatory Element-Binding Protein 1c (SREB 1c), a master gene regulator of fat homeostasis, leading to a reduction in lipogenic gene expression and intracellular fat accumulation in the body.†

†These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

KEY FEATURES
• Contains the clinical benefits of 4 carefully selected powerful ingredients including Fenugreek (Trigonella foenum-Graecum) [Containing 70% Oligosaccharides] (as Physicor™), Berberine, Bitter Orange Extract (Citrus aurantium) (as Advantra Z®), and Ashwagandha Extract (Withania somnifera) [Containing 7% Withanolides].
• A Science-Driven Formula Where All Ingredients are Independently Tested for Quality, Purity, and Potency to Guarantee Label Claim.
• Manufactured in a cGMP Facility.

KEY MESSAGES
• Physicor™ is new patented fenugreek extract standardized to a proprietary 70% galactomannan oligosaccharides content to build, burn and perform. Results from a recently published clinical study conducted by the University of Mary Hardin-Baylor showed that participants supplementing with 500mg Physicor™ per day in conjunction with resistance training had a 3.9 lbs. lean muscle gain, 3.8 lbs. of body fat reduction, and 110% increase in strength in 8 weeks.*
• Berberine (BBR) increases energy expenditure, limits weight gain, enhances thermogenesis and enhances brown adipose tissue (BAT) activity in obese laboratory animals. BBR activates AMP-activated protein kinase (AMPK) to induce the phosphorylation of Sterol Regulatory Element-Binding Protein 1c (SREB 1c), a master gene regulator of fat homeostasis, leading to a reduction in lipogenic gene expression and intracellular fat accumulation in the body.†

30 Serving Size: Two (2) Capsules | Servings Per Container: 30

MANUFACTURED IN THE U.S. • WORLDWIDE INGREDIENTS
